Dedicated to the constant pursuit of self-improvement, I spend a lot of time working towards being better than the person I was yesterday. I have a penchant for operating in a team environment and an innate ability when it comes to software development. The three most important values I bring to the table are: grit, aptitude, and attitude. I am focusing my efforts on joining a company where I can continue to grow as a person and a developer.

## TECHNICAL SKILLS

Java - Ruby - JavaScript - Spring - jQuery - CSS3 - HTML5 - GIT -  
React - Agile - REST API - Scrum

Exposure to: AJAX - MySQL - Linux - Apache Tomcat - Redux -  
Hibernate - Node - API's

## CERTIFICATIONS

Ruby Association Certified Ruby Programmer

## DEV PROJECTS

### Gmail API Quickstart

Similar to the quickstart available from Google; however, I have added a lot of 'out-of-the-box' functionality such as: clickable labels that will load corresponding message id's, message id lookup, raw message data display (Base64Encoding), and message data decoding to plain text format.

### QuoteThis

I initially created this project in order to help keep track of my stock positions throughout the day without having to open another application on my phone. This application will take input from the user on the command line or cycle through an array of listed symbols, find the quote online, parse the price and then send the information to the users phone as an SMS (text) message.

### Weather App

An up to 5-day weather forecast app accomplished using Open Weather Map and Google Maps APIs. Developing this project gave me a great learning opportunity in using jQuery and AJAX requests. After receiving the JSON response, the forecast was parsed, manipulated, and displayed using HTML and CSS.

## EDUCATION

### Codeup July 2018 - Dec. 2018

Codeup is a fully-immersive, project-based, and intensive 18 week full stack Java career accelerator that provides students with 600+ hours of expert instruction in software development.

### Austin Community College 2016 - 2017

Computer Science Major: GPA: 3.8

## EXPERIENCE

### Finish Line Car Wash

Operations Manager 2017-2018

As an operations manager my much of my time centered on providing direction to the integral staff that was concurrent with the standards and practices the business was built on. I worked closely with the other departments to understand where the company's capital was going and how to make the most efficient use of it. Where I could streamline a process I'd create a procedure to do so and oversee its implementation. I tracked our progress and increased satisfaction wherever and whenever possible.

### SPUN Ice Cream

Store Manager Dec. 2015 - Nov. 2016

As the store manager my responsibilities included: developing lasting relationships with the customers, greeting the day by opening the store and closing up in the evening, screening, hiring and terminating employees, taking inventory and addressing any discrepancies, ensuring high product quality standards, calculating payroll for different departments, working with vendors, scheduling the employees, pricing the product, and collaborating with the owners to implement the company mission statement.
