Passionate Software Developer and former delivery-driver with experience in communications, customer service and conflict resolution. My passion to attain skills in programming led to the decision to pursue a full career transition into the software development industry. I'm eager to leverage and sharpen my technical skills to help build effective user friendly programs.

Technical Skills

HTML - CSS - Bootstrap - JavaScript - jQuery - Java SE - Java EE (Servlets, JSP) - Spring - MySQL - Thymeleaf - Object-Oriented Programming - Test-Driven Development - Version Control with Git - Paired Programming

Development Projects

[Capstone \(CitySites\)](#)

CitySites is for those looking for more to do in the great city of San Antonio and soon, a city near you! CitySites is a Full-Stack Web application that utilizes JavaScript, HTML, CSS, and Java with SpringBoot framework. Powered by Google APIs and the great minds of the CitySites development team, you, the user, will be able to find fun activities, save your favorite places, and even add your own activities. CitySites will show you where to go!

[Ad-Lister Project](#)

Project built with a team of four. Users can view & post ads in this web application that contains multiple functionality features such as edit, delete and search posts. Users also have the capability to edit their username & email.

[Movies Application](#)

This was a paired project both my partner and I are proud of making and continue to build. It's a movie application that allows the user to add, edit, and delete movies from a server. We used HTML JavaScript, Bootstrap, and jQuery.

[Weather Map API Project](#)

Single-handedly built a fully responsive HTML user interface that displays daily 5 day weather forecasts using Javascript requests to several third-party API services. A single search gathers data from the user input and displays data based on the corresponding coordinates.

Professional Experience
