Driven Web Developer with a Bachelor of Arts and experience in web design. The desire to have a career in creativity and problem-solving that provides growth and mobility led to a focus in web development. Excited to leverage my creative and technical skills to develop and design web pages and software that makes your company stand out among the competition.

## Development Projects

### [BookAlert](#)

Group Project: A site that mainly utilizes JavaScript, Spring, HTML, CSS, JQuery, Ajax, MySQL, Bootstrap, and the iTunes API to allow for guests to search for their favorite authors and titles. Logged-in users with profiles can use the same search functionality but with the added features of saving authors and titles with an updated profile page that allows them to see new and upcoming releases from their favorite authors.

### [Adlister](#)

Group project: Web application that utilizes, HTML, JavaScript, Bootstrap, jQuery, MySQL, and Java to create a functional advertisement lister that allows a user to add and/or customize a new ad to a logged in user's profile which includes features such as a functioning search bar with filter abilities and sticky functions etc. including full-stack user validation.

### [WeatherMap](#)

Solo project: Web application that utilizes, HTML, css, JavaScript, Bootstrap, jQuery, Ajax, and multiple API's to create a functional weather scanner with a corresponding map of the local weather radar throughout the week.

### [MovieApp](#)

Paired project: Web application that utilizes HTML, CSS, JavaScript, Bootstrap, jQuery, Ajax, and the GoogFonts API to create a functional movie lister that allows a user to add to their list of favorite movies.

### [CoffeeLister](#)

Paired project: Web application that utilizes, HTML, css, JavaScript, Bootstrap, jQuery to create a functional coffee lister that allows a user to add and/or customize a new coffee to a preexisting coffee menu which includes a functioning search bar with filter abilities.
