## Technical Skills

HTML, CSS, Bootstrap,  
JavaScript, jQuery, Java SE,  
Object-Oriented Programming,  
Test-Driven Development, Version  
Control with Git, Paired Programming

## Education

### Codeup

Certification of Completion  
Jan 2022 - Jul 2022

A fully-immersive, project-based, and intensive 20-week Full-Stack Java Career Accelerator that provides students with 670 hours of expert instruction in software development.

Software developer with a background in customer service. Adapting, making quick decisions, team work, and communications skills are all essential qualities in the tech industry that I will bring to any role. Seeking opportunities where my background and technical skills can be leveraged to build customer friendly technology.

## Development Projects

### [On the House](#)

On the house is a full-stack web application that intends to connect people in a short distance who have items that they are willing to for free in order to reduce waste and connect with your community. As part of a team of five we have created this project utilizing Java, MySQL, Spring, Javascript, HTML, CSS and bootStrap.

### [Movie Project](#)

The Movie Project is a group project that uses an API request that gets or modifies information and displays the new information to the user. The API has a preselected set of movies that the user can retrieve, edit or delete, as well as add their own movie. My role involved getting information from the API and enabling the user to see or edit information directly into the app.

### [Weather Map](#)

The Weather Map is my first solo project, it was also my first time implementing an API into a project. Using two different API's allows the user to search for a location and the app will return the weather for the next five days. I initially encountered a challenge getting the map to update to a new location, and solved this by giving the map a geocoder instead of creating a new map every time.

### [Coffee Project](#)

The Coffee Project is a group project that displays a list of pre-selected coffee and allows the user to sort it by roast type, name, and add a new coffee. We used JavaScripts Dom(Document Object Model) manipulation. My role involved grabbing the data to populate the screen, creating the search functionality and allowing the user to add a new coffee.

## Professional Experience

### **Ferrari's Italian Villa & Chop House-** Grapevine, TX

*Expo / Busboy* Jun 2020 - Present

- Ensure fast service to meet customer needs, prepare tables for new seatings, and assist the wait staff.
- Place and deliver orders, help with set up and food service, and facilitate kitchen flow with wait staff.
