Developer Projects

[Ayuno](#)

In progress

A full-stack fasting application where users can read on new create fasts with blog-like instructions, utilize other user-created fasts, and track their current fast. Built with ReactJS, styled with Tailwind CSS, user authentication via Firebase, and data hosted with FireStore.

[My Hero Academia Rolodex](#)

A single-page search application for My Hero Academia characters. API fetch calls, and simple paging that return custom-coded cards with the details of each character and images. Built on ReactJS and fully styled with Tailwind CSS.

[Sweet Gold Photography](#)

A simple and sleek website where users can view a variety of wedding photos and submit a contact form for inquiry on packages available. Built purely on HTML, CSS utilizing SCSS, and JS to randomize gallery on page load. Deployed on AWS with HTTPS - S3, Route53, CloudFront, and with AWS Certificate Manager. Now hosted on Netlify.

[Kid Invest](#)

A full-stack application targeted towards 7+ years old youth. This investing and business simulator will teach kids to learn, play, and practice investing at an early age. Users run a lemonade business that uses earnings to invest in kid-friendly stocks simulated through a real-world stock API. This application also incorporates Java, Spring Boot, MySQL, JavaScript, HTML, CSS, and Bootstrap.

Work History

Present

React Developer

ACEing Autism, San Antonio, TX

- Built a module based project utilizing ReactJS and Firebase realtime database that allows event managers to create and manage events to see who signed up.
- Built their program location module to create, edit, or delete tennis locations that keeps track of inventory, contacts, staff, locations, and visits.
