PERSONAL PROFILE

I love breaking down problems to find a source and a solution. Software Development allows me to channel that passion into creating dynamic web applications and inspires me to continue to learn and develop new skills. I look forward to working with a team where I can immediately contribute and continue to grow through learning from others.

TECHNICAL SKILLS

- HTML
- CSS
- JavaScript
- BootStrap
- VCS with Git Paired
- Paired Programming
- Thymeleaf
- Java SE
- MySQL
- Spring Boot Framework
- Java EE (Servlets, JSP)
- jQuery
- Object Oriented Programming
- Test Driven Development

PROFESSIONAL EXPERIENCE

Gregory S. Simpson & Associates, PC., 2019-2020

Junior Staff Accountant

- I provided detailed bookkeeping services for both corporations and private individuals and maintained communications with the firm's clients to ensure that we had everything necessary to provide excellent accounting and tax preparation services.

Apogee Foods, LLC., 2017-2019

Quality Assurance Technician

- I performed all day-to-day quality assurance tasks per the HAACP specifications for a food manufacturer specializing in vegan, gluten-free, and organic snacks and desserts.

Santa Monica-Malibu School District, 2015-2017

Paraeducator 3

- I worked in both elementary, and middle schools providing one-on-one assistance, support and instruction to children with various special needs.

DEVELOPMENT PROJECTS

GigMatch

- A full stack web application that utilizes Java with a SpringBoot framework. GigMatch is a location based social network app that helps to match venues, bands and individual musicians with upcoming gigs or talent for upcoming events. This project implements multiple APIs and saves user information, posts, and events to a MySQL database.

AdLister

- A full stack Java application that utilizes MySQL for the database, as well as the MVC design pattern to let a user to view all of the ads in the database, register for the site, and login to their personal profile. Once logged in, the user can view all the ads they have created as well as create, edit, delete, and view individual ads.

Movie App

- A paired programming project that allows the user to add, edit, delete and provide a rating for movies. A mock database created with a JSON-server allowed us to focus on the front-end and AJAX requests. I contributed to this applications development with JSON requests, jQuery, and styling with BootStrap.

WeatherMap

- WeatherMap is an application that provides a 5 day forecast for any location globally. Using JavaScript and jQuery as well as incorporating a Mapbox API it shows information in real time to the user.

ACADEMIC BACKGROUND

Codeup

Certificate of Completion, 2020

- A fully-immersive, project-based, and intensive 20 week full stack Java career accelerator that provides students with 670+ hours of expert instruction in software development.
