TECHNICAL SKILLS

HTML	MySQL
CSS	Spring Boot Framework
JavaScript	jQuery
Bootstrap	Object Oriented
VCS with Git	Paired-Programming
Java SE	TDD
Thymeleaf	Java EE (Servlets, JSP)
React.js	

Exposure to: Gatsby, Python, Data Structures, Algorithms, Express.js, MongoDB, WordPress

PROFESSIONAL EXPERIENCE

STOMP 2016-2020

Performer

As a performer with the New York, North American Tour, and World Tour companies it was my responsibility to quickly learn the performance material with the flexibility for on the fly changes to the show. The ability to react appropriately and improvise on the spot in live performance situations is a constant as casts rotate every show providing for a unique experience of cooperative team work.

BLAST! 2014

Performer

As a swing percussionist with the 2014 Japan Summer Tour, it was my responsibility to learn and perform four different roles including two feature solo tracks. Being on call for all four roles was a great challenge to my stamina and ability to learn material fast as I was called upon frequently without notice. I made it my mission to work with the other members of the team to understand critical nuances that the group depended on so as to assimilate my performances seamlessly.

Starbucks 2012-2015

Barista

Responsible for establishing the daily setup and functionality of the store. Maintained a constructive partner work environment by offering positive interaction and support towards product flow and customer service. Engaged with customers on a personal level while offering expeditious product supply and anticipating customer needs and demands.

DEVELOPMENT PROJECTS

ContactKeeper

A MERN stack application that allows users to register an account and view, add, update, and delete contacts. The contacts are stored dynamically so that each field, when clicked, will activate the field's relevant action (i.e. clicking a contacts email will open an email template, etc.).

Hilltop Liquors

A custom group programming Spring Boot web application dedicated to the Victoria, Tx based liquor store, Hilltop Liquors. We used Thymeleaf, MySQL, Javascript, CSS, jQuery, and Bootstrap. We also used VCS with Git, a Kanban board, user stories, feature lists, and wire-framing to manage our project workflow. This capstone additionally, incorporated the Sendgrid API to integrate and automate user sales and promotional interactions.

Adlister

A group programming full-stack web application using Java EE with Servlets and JSPs. This app allows users to create, read, update, and delete ads, as well as their user profile. This was a 4-day sprint in which we had to build upon pre-existing code and functionality, strategically develop user-stories/features lists, wire-frame, and assign a Kanban board approach for fast turn-around.

ACADEMIC BACKGROUND

Codeup 2020

Certificate of Completion

A fully-immersive, project-based, and intensive 20 week full stack Java career accelerator that provides students with 670+ hours of expert instruction in software development.

Coastal Carolina University May 2008 Bachelors of Arts in Music

Graduated with Honors: Cum Laude
