I'm a personable and energetic Jr Web Developer looking to expand and grow my skills with a team. During my time in the military, I've learned to adapt quickly to any situation and use any available resources to accomplish a task. I became a Developer because I love technology and the ever-expanding aspect of it. I hope to bring my dream to fruition by combining my entire skillset into any projects I work on in the future.

Technical Skills

HTML	Test-Driven Development
CSS	Java SE
JavaScript	MySQL
Bootstrap	Spring Boot Framework
VCS with Git	jQuery
Paired Programming	Object-Oriented Programming
Thyme Leaf	Java EE(Servlets, JSP)

Military Background

US Army 2016 - 2019

94F Computer/Detection Systems Repairer

Supervise sustainment level maintenance and repair on microcomputers, electromechanical telecommunications equipment, field artillery digital devices, Global Positioning System, switchboards, telephones, associated wire instruments/equipment, night vision devices/equipment, laser and fiber optic systems, mine detection and dispensing systems, battlefield illumination devices, nuclear, biological and chemical warning measuring devices.

Security Clearance (Current): Secret

Professional Experience

Trugreen 2019 - 2020

Lawn care Technician

As a lawn care specialist, the daily job consisted of going over a day's specific itinerary and loading the necessary chemicals and supplies for the day. We had to keep a daily before and after the trip maintenance log of the assigned truck. A lawn care specialist had to handle all types of customer interaction ranging from supportive to extremely upset in a timely manner.

Development Projects

Remote Start August 2020

Remote Start is a full-stack application created using Spring Boot, Thymeleaf, MySQL, Java, Javascript, CSS, and HTML. Remote Start is an online "project management" tool that allows users once they sign up, to become a part of a team or be a team leader and delegate tasks to their respective team members.

Adlister July 2020

The Adlister was a fully functional java application that allows users to register for the website, create their ad postings as well as delete them once they have logged in. Adlister was built using a custom database, MVC, and JDBC.

Movies App May 2020

The Movies Application is a simulated DataBase project that allows users to add movies with a rating or edit existing ones with a click of a button. This project included a focus on Javascript, jQuery, and used multiple tools such as npm and modules.

Academic Background

Codeup Sep 2020

Certificate of Completion

A fully-immersive, project-based, and intensive 20 week full stack Java career accelerator that provides students with 670+ hours of expert instruction in software development.
