TECHNICAL SKILLS

HTML
CSS
JavaScript
Bootstrap
jQuery
VCS with Git
Paired Programming
Thymeleaf
C#
Java SE
MySQL
Spring Boot Framework
Object Oriented Programming
TDD
Java EE Servlets

WITH EXPOSURE TO:

React Native

ACADEMIC BACKGROUND

Codeup **10/2020** **Certificate of Completion**

A fully-immersive, project-based, and intensive 20 week full stack Java career accelerator that provides students with 670+ hours of expert instruction in software development.

DEVELOPMENT PROJECTS

Countertop **10/2020**

A full stack Java web application created using Spring Boot that allows users to register an account, create & post recipes, leave comments on other recipes, and search through recipes that other users have uploaded, as well as recipes from the Spoonacular API.

Ad Lister **08/2020**

A full stack Java web application created using a MVC structure that allows users to register an account, create and post an ad listing, search through the different listings, and view & edit their own ads. Everything is saved to a local MySQL Database that utilizes One to One, Many to One, and Many to Many database connections.

Movie Application **08/2020**

A paired programming project where we were tasked with creating a web application to interact with a pseudo back-end environment. This project involved constant collaboration where I was able to facilitate discussion and determine our approach and code design. The languages used are primarily HTML, CSS, Bootstrap, and JavaScript with jQuery.

Weathermap **07/2020**

A solo project. I coded a web app to get map data from the Mapbox API and send it to the OpenWeather API which returned a 5-day forecast for any location. The languages used were HTML, CSS, Bootstrap, and JavaScript with jQuery.
