 [GitHub](https://github.com)

Accomplished technician and Navy veteran with a background in structural modifications, creative solutions, and quality assurance. Experience in working technical support in Antarctica increased the desire to transition into software development full time. Looking to continue exploring frameworks and technologies to improve the end-user experience for future clients.

Technical Skills

HTML - CSS - Bootstrap - JavaScript - jQuery - Java SE - Java EE (Servlets, JSP) - Spring - MySQL - Thymeleaf - Object-Oriented Programming - Test-Driven Development - Version Control with Git - Paired Programming

Development Projects

PodLobby

A social media application designed to be a central location for like-minded podcast enthusiasts to get together and collaborate on new ideas. PodLobby allows users to easily share their favorite podcasts while being able to find guest speakers for any podcasts they may be working on. As a registered user, podcasters can add their podcasts to the site, get recommendations from the site to discover new podcasts, view, listen and comment on other users' creations. This application was Java dominant and utilized Springboot, MySQL, Materialize CSS, JavaScript, HTML and the Filestack API.

SoJu

Java based content sharing application to assist educators in finding resources for sensitive topics such as immigration, racial discrimination, and gender equality. Database constructed with MySQL, pages render dynamically, and includes a user authorization portal.

Weather App

Provides 5-day forecasts by location using JavaScript, JQuery, Map/Weather API's and Bootstrap. Map pins are droppable worldwide and will update forecasts to selected locations.

Coffee Project

Created a JavaScript application to allow users to search, add, and delete coffee roasts, then Styled with Bootstrap
