Software Developer

 (254) 350 4706  [victorfhernandez3@gmail.com](mailto:victorfhernandez3@gmail.com)  [LinkedIn/VictorFHernandez](https://www.linkedin.com/in/VictorFHernandez)  [GitHub/VictorFHernandez](https://github.com/VictorFHernandez)

Army veteran and emerging Software Developer with consulting experience. 2020 has provided the unique opportunity to pivot and seek out a career that speaks to my creative and technical interests. My goal is to join an employer that will challenge me while supporting my growth and development as a full stack web developer.

## Technical Skills

HTML - CSS - Bootstrap - JavaScript - jQuery - Java SE - Java EE (Servlets, JSP) - Spring - MySQL - Thymeleaf - Object-Oriented Programming - Test-Driven Development - Version Control with Git - Paired Programming

## Development Projects

### [Annotation Station](#)

Annotation Station is an application centered on creating organized collections of timestamped notes of YouTube videos. With this application the user will be able to pick a specific part of a YouTube video and make a timestamp that creates a collection consisting of sections and notes made by the user. The users would be able to create their own unique profile and add all their collections to their profile page, from there the user decides either to share their collections within the app's community or keep them private for personal use. This application was built with Java, Spring Boot, MySQL, HTML, CSS, Bootstrap, JavaScript, AJAX Request and jQuery

### [Contact Manager CLI Application](#)

A command line application that keeps track of contacts. Using Java, users will be able to display all contacts and have the ability to create, edit and delete contacts from the file. The application keeps its data in a file so that the information persists between runs of the application.

### [Coffee Project](#)

Created a JavaScript application that allows users to search, add, and delete coffees by name and roast. Used CSS to style the page to have a coffee shop theme. The users can browse the application for any coffee that is currently in the database and have the ability to create their own coffee by name and roast.
