Technical Skills

HTML • CSS • Bootstrap

JavaScript • jQuery

Java SE • Java EE (Servlets, JSP)

Spring • Thymeleaf • MySQL

Object-Oriented Programming

Test-Driven Development

Version Control with Git

Paired Programming

Education

Codeup

Certification of Completion

Jan 2020 - Jul 2020

A fully-immersive, project-based, and intensive 22-week Full-Stack Java Career Accelerator that provides students with 670 hours of expert instruction in software development

Northwest Vista Community College

Associate of the Arts

June 2020

Former production manager with 5+ years of experience navigating the day-to-day for a small time operation. Recent career transition into web development leveraging an inquisitive mindset and experience responding to situational variables. As an avid learner, the idea of belonging to an industry that is continually evolving is greatly appealing. Eager to join a team of like minded individuals and grow together in honing our craft.

Development Projects

Curated Ink

HTML, CSS, Bootstrap, JavaScript, jQuery, JSON, AJAX, MySQL, Java, Spring Boot, Thymeleaf, SendGrid API, Filestack API, Collaborative Project

Curated Ink gives tattoo artists an innovative social media platform to market their brand and showcase their portfolio of work to tattoo enthusiasts and potential customers. This streamlined process allows new customers to be easily gained through the different gallery views, presenting the opportunity for potential clients to follow an artist and stay up to date with their body of work, and for appointments to be requested via email by a client. This was a four person collaborative project.

ADventure

Java, MySQL, HTML, CSS and Bootstrap

In collaboration with a team of three, we developed a full-stack web application similar to craigslist. The fully styled application allows a user to register an account and post listings of outdoor gear they are selling along with posting upcoming events. Users can also edit their own ads and user information and view other user's ads.

Weather Application

Javascript, Bootstrap, CSS, MapBox API and OpenWeatherApp API

Developed an application to display a 5-day weather forecast for a user specified location. Allows the user the ability to either search or use an interactive map in specifying the location.

Movie Application

Built with Javascript, JQuery CSS and Bootstrap

Paired programming application using JavaScript and ajax requests to allow users to search, add, and delete movie information by name and category. Planning on expanding the project and implementing the TMDb movie API to give users access to a wider range of movie information.

Professional Experience

Quality Charge - Boerne, TX

Production Manager / Jan 2015 - Dec 2020

- Assessed and documented operational procedures in order to reevaluate and implement more cost and time effective production practices as well as more environmentally friendly solutions.
- Worked closely with vendors to negotiate better pricing of products
