Technical Skills

HTML, CSS, Bootstrap,

JavaScript, jQuery,

Java SE, Java EE (Servlets, JSP),
Spring, Thymeleaf, MySQL,

Object-Oriented Programming,
Test-Driven Development, Version
Control with Git, Paired
Programming

Education

Codeup

Certificate of Completion
May 2021 - Nov 2021

A fully-immersive, project-based, and intensive 22-week Full-Stack Java Career Accelerator that provides students with 670 hours of expert instruction in software development

Full Stack Software Developer and Army Veteran with former experience in customer service and product customization. Leveraging coding skills and great attention to detail to create products and software that are user-friendly. Passion and dedication are two things I'll never run out of so I'm thrilled to merge my talents with your company.

Military Experience

United States Army - Fort Hood, TX

Petroleum Laboratory Specialist / Oct 2016 - Jun 2019

- Implemented a new lab reporting system to increase efficiency and compliance, and trained a new team on the system while stationed in Korea; received Army Commendation Medal for this work
- Conducted daily quality audits and evaluated the data to make recommendations regarding product disposition to reduce transportation delays
- Implemented reporting compliance according to the American Society for Testing and Materials testing methods
- Applied fire prevention and safety control procedures in handling volatile products

Professional Experience

WellMed Medical Management - San Antonio, TX

Data Engineer / Feb 2022 - May 2022

- Chief mapping specialist for understanding table flows and architectural structure of Zephyr
- Involved in the effort for automation and optimizing performance metrics for API's from a data standpoint
- Forming data modeling to support development teams and resolving data base solutions
- Created data flows in support of development teams

Development Projects

[Dream Home](#)

During your home buying journey keep track of the homes you love in one place! Creating listings of the homes you've seen once you've registered for an account and adding an image for reference! To build this full-stack application I utilized Spring, Spring Security, Thymeleaf, Java, Javascript, HTML/CSS, and the Filestack API.

[Coffee Project](#)

In our coffee project, we were able to use a combination of HTML, CSS, and JavaScript to display a form that allows the user to view a list of coffees. With JS addEventListeners we were able to accomplish the effect that when a user starts to type a coffee name, the coffee's with whatever letters that match would display.

[Movie Project](#)

With the use of HTML, CSS, jQuery, Bootstrap, and Google Fonts, we were able to build a web application that allows you to add, search, edit and delete movies!

[Contacts Manager Application](#)

Using Java, I was able to build a program that allows you to choose between options that give the user the choice between viewing, adding, searching a contact, or simply exiting the program.
