[LinkedIn/DestineyRodney](https://www.linkedin.com/in/DestineyRodney)
[GitHub/DestineyRodney](https://github.com/DestineyRodney)

Passionate full stack developer planning to use my previous experience as a Caregiver where I developed skills in leadership, customer service, and compliance. Merging consumer behavior and branding to develop software and programs that are user-focused and accessible to enhance user experience.

Technical Skills

HTML - CSS - Bootstrap - JavaScript - jQuery - Java SE - Java EE (Servlets, JSP) - Spring - MySQL - Thymeleaf - Object-Oriented Programming - Test-Driven Development - Version Control with Git - Paired Programming

Development Projects

[Share Capstone](#)

Share is an online marketplace where members can borrow and lend out items. Users can create an account, list items, view profiles, message users, and leave reviews. This application was pairprogrammed utilizing the following technologies; Java, Spring Boot, Thymeleaf, MySQL, Bootstrap, CSS, HTML, and JavaScript.

[Adlister](#)

Manga Trader is a full stack application where users can find and sell and buy manga. The user can create an account, log in, and create and view posts of other manga fans. This application was pair programmed using MySQL, bootstrap, and Java.

[Movie Project](#)

A paired programming project utilizing JavaScript, HTML, CSS, and Bootstrap to generate an application that allows users access to movies from an online database. Users are granted the ability to add, edit, and remove movies from the webpage based on their personal preferences.

[Weather Map Project](#)

A solo Weather Map application that uses Javascript, HTML, JQuery, and Weather Map API to display 5-day weather forecasts. This user-friendly program also grants users the option to either input a city or to drag a marker to a specific location on the map in which the weather forecast application will display the updated data for that city along with an icon that corresponds to the specific weather.

[Coffee Project](#)

A pair programming project that utilizes Javascript, Bootstrap, HTML, and CSS to generate a page list of coffees that the user is then able to add to and delete from.
