Technical Skills

HTML - CSS - Bootstrap - JavaScript - jQuery - React JS - Java SE - Java EE (Servlets, JSP) - Spring - Spring Boot - MySQL - Thymeleaf - OAuth 2.0 - Object-Oriented Programming - Test-Driven Development - Version Control with Git - Paired Programming

Development Projects

[The Locker Room](#)

The Locker Room is a sports-based Full-Stack Application, built with React JS and Spring Boot. The purpose of this application is to provide those die-hard fans with quick access to the information that matters without all the extra clutter and distractions. The application will host their favorite Team's Seasonal and Divisional Records, NFL news coverage, Player information with injury updates, and of course; a schedule listing all games that will play that week with live Game Score and Quarter updates.

[Coffee Project](#)

C0FFEE is one of the most happening places for coffee lovers. C0FFEE gives users the freedom of interacting with various types of coffees by searching for, filtering, and adding any coffee of their choice using JavaScript. C0FFEE has an aesthetic minimal user interface that was built using HTML and Bootstrap 5 allowing users to easily navigate through our site allowing for a simple and satisfying experience.

[WeatherMap](#)

WeatherMap is a fully responsive, highly accurate, single page weather tracking app that allows the user to search for the forecast for any location they wish with the search bar provided. With the help of JavaScript and jQuery, the search bar assists the user by providing suggestions as the user is typing. Once the user selects a location of choice, a marker will be accurately placed on top of the desired location. With the implementation of the MapBox API, the application also provides the user with a fully functional map below the shown forecast. When a user clicks anywhere they desire on the map, a draggable marker is then placed on the exact location the user clicked which provides the updated forecast of the exact location clicked. With the help of HTML, CSS, and Bootstrap 5, our WeatherMap has a clean and easy to use user interface which also includes a Dark Mode feature.

[Movie App](#)

MovieApp makes it easier for users to navigate through the thousands of popular movies out today. MovieApp allows users to search for, filter, add, edit, favorite, and delete any movie of their choice using JavaScript and jQuery. With the power of HTML, CSS, and Bootstrap 5, we were able to create a clean user interface allowing for users to easily navigate through our single page application.

[Contacts Manager](#)

Manage your contacts with a few keystrokes. This Contacts Manager application allows the user to view, add, delete, and search through their contacts list. The contacts are displayed in a table that lets you easily identify your list. Contact Manager App is a command line application and is strictly programmed with Java.

[Ad Lister](#)

Adlister is a full-stack web application that allows individuals to mutually buy, trade, and sell items. The application connects audiences looking for specific items throughout our minimal styled pages that were built using Thymeleaf. Users are able to view all ads, whether they decided to register an account or just casually viewing. User's that create an account have full CRUD capabilities with their own personal account, and with their own ads as well. The applications backend was built strictly with Java.

Military Experience

US Army - Fort Bragg, NC

Team Leader / Oct 2019 - Oct 2020

- Contributed to the physical and mental readiness, weapons proficiency, medical skills proficiency, and the leader development of three personnel within my team which provided maximum efficiency when large scale operations were conducted
- Led and conducted combat patrols within the guidelines of the unit commander resulting in successful military operations
- Prepared elements within my team for deployment and the theater of operations, allowing for minimal to no distractions to interfere with complex tasks at hand
- Managed assigned equipment of valued in excess of \$500,000.00
- Contributed as a member of special teams, including enemy prisoner of war search and aid/litter

US Army - Fort Bragg, NC

Team Member / Jun 2017 - Oct 2019

- Maximized efficiency and productivity within my team by knowing the duties/tasks of my team members, as well as prepared to fill in with their weapons, if needed
- Maintained utmost discretion when dealing with sensitive information
- Performed administrative taskings

Professional Experience

JMA Placement Inc. - Carrollton, TX

Warehouse Associate / May 2021 - Jul 2022

- Picked product from stock and loaded product onto outbound trucks based on store orders
- Assisted in product movement within the warehouse for the purpose of consolidation and rotation
- Maintained a clean and safe work environment resulting in corporate maintenance standards to be exceeded.

Best Buy - Cedar Hill, TX

Product Flow Specialist / Oct 2020 - Jan 2021

- Received and shipped product to and from stores, stocked product in store, and assisted customers with product carry-outs and online orders
- Supported overall store goals by performing tasks that ensured product integrity and customer fulfillment

Whataburger - Duncanville, TX

Cashier / Sep 2016 - May 2017

- Attended customer needs by taking their food and drink orders
- Cleaned work stations and dining areas to corporate standards
- On unoccupied times, I supported teammates and customers with compassion and empathy by manning drive-thru windows, restocking foods, unloading food shipments, and answering customer questions regarding menu items, company policies, and company services

Education

Codeup

Certification of Completion

Jul 2022 - Jan 2023

A fully-immersive, project-based, and intensive 20-week Full-Stack Java Career Accelerator that provides students with 670 hours of expert instruction in software development.
