Education

Codeup

Certification of Completion

Sept 2022 - Feb 2023

A fully-immersive, project-based, and intensive 20-week Full-Stack Java Career Accelerator that provides students with 670 hours of expert instruction in software development

University of Phoenix

Associates in Arts Information Technology

2016 - 2018

Completed two years of undergrad studies focusing on information technology

Before my time at CodeUp I was a student attending the University of Phoenix in an online class setting earning my Associates of Arts in Information Technology. I spent 15 years working in the service industry and decided it was time to make a real contribution to society. I am looking forward to working with an awesome team to develop new and interesting applications that could shape and mold our world's future.

Development Projects

[Java-locity](#) a simple travel itinerary planning application on a java spring boot framework. Built in a team programming environment. Utilizing spring security, spring file upload support, Bootstrap 5.2, Tripadvisor API, MapBox API, and mysql databases. With an intricate combination of javascript, html, and css files. I mostly handled the style aspect of this project with some editions to the spring boot controllers. [GitHub link to repository!](#)

[Star-Ship-Adlister](#) a simple ad lister for buying and selling new or used starships of the Star Wars World. Built using Java and object oriented programming, tied together with a mysql database in a paired programming setting.

[Movies The Final Frontier](#) a simple html based application for Rating movies in the database added by the user. Consist of html, javascript, bootstrap, and css. Created in a paired programming setting.

[Coffee In Time](#) a simple html page for selecting different coffee roasts. Using javascript, html, and css in a paired programming setting.
