

AUSTIN GHIGLIOTTY

Software Developer

I've wanted to be a video game programmer ever since I was a kid. I'm very patient and able to pick up on new things fairly quickly, and I'm very good at problem solving. I'm looking forward to being on a team that I can contribute to their mission and that will help me grow as a developer.

SKILLS

HTML Java SE CSS MySQL JavaScript Spring Boot Framework Bootstrap jQuery
VCS with Git Object Oriented Programming Paired Programming Thymeleaf Java EE
(Servlets, JSP)

DEVELOPMENT PROJECTS

Adlister

09/19

A website that allows users to view ads people have listed, and once they sign up or log in, they can create, edit, and delete their own ads. My contributions were adding a search bar to filter through the ads, making the register form save information, and some styling. Made with Java, MySQL, custom CSS, and Bootstrap.

Contact Manager

08/19

A command line program that allows users to store, view, and edit contacts' names and phone numbers from another file. My main contributions were the edit and delete functionality, but I helped with numerous other parts. A paired programming project made in Java.

Movie Project

07/19

A movie list that a user could add movies to and edit pre-existing movies, and uses the OMDb API to get information on the movie. A paired programming project made in JavaScript with npm and custom CSS

Weather Map

07/19

A page that shows a 3-day weather forecast for your location and a map to change the location of the forecast. This project uses Dark Sky API for the weather forecast, and Mapbox API to choose which location to send to Dark Sky. Made with JavaScript with custom CSS.

ACADEMIC BACKGROUND

Codeup

10/19

Certificate of Completion

A fully-immersive, project-based, and intensive 18 week full stack Java career accelerator that provides students with 600+ hours of expert instruction in software development.
