Lionbridge

Internet Assessor May 2014 - June 2015

Conducted reviews of websites and media to help revamp and enhance search results.

Intech Southwest

Computer Technician November 2013 - July 2014

Installed computer hardware at various schools within the City of San Antonio.

EDUCATION

CODEUP

Certificate of Completion 2020

Codeup is a fully-immersive, project based, and intensive 20 week full stack Java career accelerator that provides students with 670+ hours of expert instruction in software development.

UTRGV

Master of Public Administration 2016

UTSA

Bachelor of Political Science 2014

NORTHWEST VISTA COLLEGE

Engineering Major 2011

PROJECTS

POKEDEX

Created my first react project that utilizes the poke API and React programming language. This web application shows the first 151 pokemon and their respective stats.

PERSONAL PORTFOLIO

Built a personal portfolio website that showcases my skills with HTML and CSS. Sass was used to incorporate the styling into the project.

BANKING APP

Created a banking application that lets users withdraw, deposit, check their balance, and shows the last transaction. This program was strictly created using Java and runs through the console.

AIA PORTFOLIO

Built a business-oriented landing page for a client that works for a tax incentive company called American Incentive Advisors. I used a combination of HTML and CSS for this project.

PANTRYCHEF

A full-stack application that helps users both find and upload recipes. The site's main feature allows you to input your current pantry/fridge items and find a recipe based on those ingredients. This is done through the use of Spoonacular API, as well as our MySQL database. Users can connect through recipe comments, save necessary ingredients to their shopping list, and view other users' profiles for a user-friendly experience.

ADLISTER PROJECT

A full-stack application that uses a combination of Spring Boot and Java. The general functionality allows the user to create, read, update, and delete posts that contributed to the overall advertisements list.

STUDENT DATABASE APP

Created a Java console-based application that allows an administrator to manage student enrollments and balances.

EMAIL ADMINISTRATION APP

Created a Java console-based application that allows an administrator to create email accounts for new hires.

MOVIE PROJECT

An application that allows users to add, edit, rate, and delete movies. A Json-server was used to mock a database and our backend, so that we could focus on the front end and AJAX requests. I assisted with styling JQuery and Json requests.
